The history of mathematics can be seen as an ever-increasing series of abstractions. The first abstraction, which is shared by many animals, was probably that of numbers: the realization that a collection of two apples and a collection of two oranges (for example) have something in common, namely quantity of their members. As evidenced by tallies found on bone, in addition to recognizing how to ...

Nim is a simple combinatorial game with finite possibilities. But unlike tic-tac-toe, that other game of limited possibilities, there is tremendous variety in both Nim's conception and implementation. The theory of the Nim game was discovered by mathematics professor Charles Bouton at Harvard University in 1901.
