Snakes, alligators, and crocodiles are all reptiles. Reptiles are tetrapods and amniotes, which means their embryos are surrounded by a thin membrane. Modern reptiles live on every continent except Antarctica. They range in size from the newly-discovered Jaragua Sphaero, at 0.6 inches, to the saltwater crocodile, at up to 23 feet.

### **Reptiles and Amphibians Lessons - LessonCorner**

The reproduction cycle of reptiles is typically oviparous, they lay eggs. Because of the reptiles ability to navigate easily on land, eggs are usually inland away from predatory danger. The number of chambers in the heart of reptiles and fish is a significant difference in terms of evolutionary theory.

### **What Is the Difference Between Fish and Reptiles ...**

about 420 million years ago (mya). Lobe-finned fish appeared in the fossil record about 395 mya. The oldest known amphibian fossils date from about 370 mya. Reptile fossils have been found in deposits about 350 million years old. One well-known group of reptiles—the dinosaurs—first appeared about 230 mya.

### **3 Fish, Amphibians, and Reptiles - Jenkins Independent School**

Snakes, legless lizards and computer virus lizards all lack ft. Vertebrate animals are divided into mammals (e.g. human beings, canines, horses, whales, etc.), reptiles (e.g. snakes and lizards, crocodiles), amphibians (e.g. frogs and toads), birds e.g. (chickens and eagles), and fish (as I defined above). those are literally not the purely classes of animal. those are purely vertebrate animals. there are distinct, many classes of invertebrate, alongside with Insecta (insects) and Arachnida (spiders, scorpions, ticks, etc.). those are all animals too, component to the dominion Animalia. it truly is a well-known false impression that those are 'no longer animals', for some reason. superstar Gazer - frogs are literally not reptiles, they're amphibians.
